### ❓ What it is?

GlobalSUITE® - Information Security allows your company to cover the complete cycle of analysis, implementation, management and maintenance of the standard ISO 27001:2013. It's available in multiple versions that are adapted to the necessities of multinationals, Public Administrations or small companies. Our software complies with the most complex requirements easily and intuitively.

Thanks to GlobalSUITE® - Information Security you can perform the process of Risk Analysis and Risk Management focused in processes and assets, as well as you will have well documented your Statement of Applicability and totally updated. In this way, It will be aligned with risks and the specific documental procedures.

### 🌐 Paper-free management

It allows your company to achieve the entire implementation with a paper-free management system. All information is registered in the platform and it has a document management system that will help you to manage the whole inherent documentation to any management system.

### 🕒 Collaborative work

One of the main benefits of GlobalSUITE® is how it can be used among the team workers or the different users of the system, because it's a web platform.

The risk analysis, an essential part in the implementation of the standard ISO 27001:2013, could be done in stages and with a collaborative methodology among the different coordinators of the business units.

### ✅ Easy to use

It's the best value of GlobalSUITE® - Information Security while other companies can't say the same. The learning curve is minimal for those users that don't know the standard ISO 27001:2013, and we don't forget the compliance of the directive. We obtain clear results in a short time. It helps you taking the right decisions.

Discover why GlobalSUITE® - Information Security has been used in the majority of implementation projects of ISO 27001. The numbers support us and our customers also do.
